Hi Sandeep,

Following are the confirmations on our queries:

1.   Logo on Landing page: In desktop version it will have logo but in mobile it will not.

2.   Header Component: First of all there will be three versions of this application standalone, web & mobile version. Header component will come in standalone version (From header- Strategy, Digital, Technology, Operations- these are not links- We just need to show it (Static)). Header component will not be there in web version of Accenture portal & mobile version.

3.   Sharing: As in new PSD on the "End page" (Congratulations screen) three icons (LinkedIn, Facebook, Twitter) were missing. But it will be there at the bottom right corner (as given in ACC_Women_Quotient_Game_v6).

4.   We will get new Mobile version PSD for "End page" (Congratulations screen). As end page graphics for desktop version has changed in new PSD.

Thank you,

Snehal Kalbende

Subject: WQQ - queries

Hi Ashish,

I have worked on responsiveness.

But have following doubts/queries, You can call me any time today for the discussion

> Final color mockup for mobile look.Currently the shared PSD has UI for desktop based systems, But we would require of how it would look in mobile. Current PSD and the mobile-version images which was shared with me, have some discrepancy in it for instance Landing Page in Current PSD and mobile version has difference (as in desktop version has no logo | mobile version has logo).

>Device Testing, Even though there are certain simulators with help of which I am developing the site, would require certain devices,Let me know how should be progress on that front.This should be on high priority.

>Header Component: PSD shared with us has Accenture Logo on top and its details. I assume this wont be required in our app, Since we are hosting the application on Accenture portal itself.So I have not included in the current app. Please confirm if my understanding is correct.

>Deliverables : Currently I am not adding up new logic addons(side progress bar). Since the focus is first on making current functioning app responsive,for the resolutions we have committed.First UI sets up as expected adding up logic would be easy part.So Initial deliverable we can concentrate on delivering app as per different resolution. This is my view, let me know if you have any other approach for handling the deliverable.

Thanks,

Ashish

Yes. Sorry, mistakenly wrote wrong for Logo on landing page point.

It should be-

1. Logo on landing page- for web version: It will not have logo.

2. Logo on landing page- for desktop/standalone version: It will not have logo.

3. Logo on landing page- for mobile version: It will have logo.

Thank you,

Snehal Kalbende

Few things from UI we received for mobile version (the link for filename- Game_Phone_version_29042014.psd from WeTransfer)-

1. They have removed logo from landing page of mobile version too & added it on end page similar to web & standalone version UI. So, now we don't have logo on landing page in any of the version of WQQ.

Thank you,

Snehal Kalbende
